

micro:bit | Radio

Connect the micro:bit to MicroBlocks.

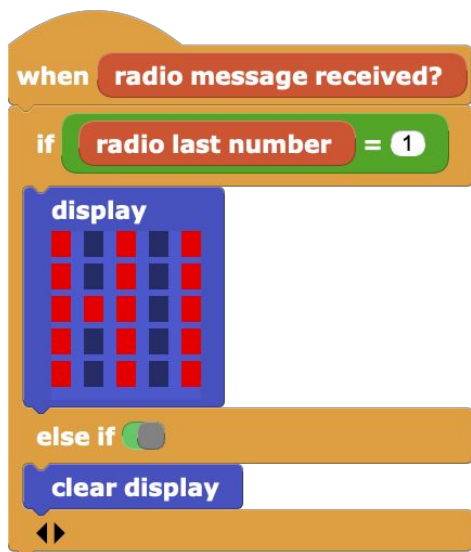

Radio blocks are a great way to control your micro:bit remotely. You will need two micro:bits: one to be the sender and the other to be the receiver.

Follow the steps below to get your micro:bits communicating with each other!

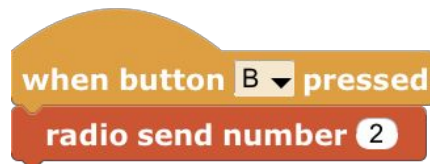

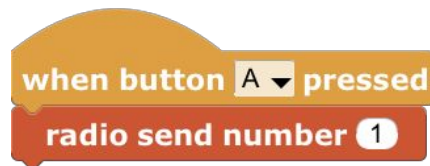

Receiver Code

After you write this script, disconnect this micro:bit and attach it to a battery.

Sender Code

Note: If others near you are also using radio, using different groups will avoid confusion. Add this script to both sender and receiver:

Use the same group number for your sender and receiver but different from others.
